Education

Sahyadri College of Engineering and Management **2022 – 2026**
Bachelor of Engineering, Information Science & Engineering Mangalore, Karnataka

Professional Summary

Cloud and DevOps enthusiast with hands-on experience in AWS, Docker, Terraform, and GitHub Actions through academic and personal projects. Familiar with deploying cloud infrastructure, containerizing applications, automating CI/CD workflows, and working with Linux environments. Passionate about cloud technologies, automation, and building scalable full-stack applications while continuously learning modern DevOps practices.

Internship Experience

RDL Technologies Pvt. Ltd **Jan 2026 – May 2026**
Full Stack Developer Intern

- Engineered an automated attendance processing system by integrating an IP-based biometric scanner (RDL810) with a Node.js/Express.js backend, eliminating manual tracking across **500+ records**.
- Developed **10+ RESTful APIs** for authentication, departmental management, and attendance services while designing a normalized MySQL schema (5 tables) optimized for enterprise reporting.
- Implemented payroll-grade work-hour calculation logic supporting multi-session logins, weekends, and holidays, automating attendance analytics across all departments.
- Built React.js dashboard components and integrated MongoDB with compound indexing, enabling real-time infrastructure monitoring, incident tracking, and root cause analysis from Windows Event Logs.
- Developed a Python/Flask log-processing pipeline that normalized Windows Event Logs, removed duplicate records, and improved troubleshooting through automated rule-based incident detection.

Project Experience

Cloud-Native Three-Tier Application Platform **April 2026 - May 2026**
AWS EC2, Docker, GitHub Actions, PostgreSQL, Terraform

- Automated AWS infrastructure provisioning using **Terraform**, configuring EC2, PostgreSQL, VPC networking, and Security Groups for repeatable cloud deployments.
- Containerized React and Node.js applications using **Docker** and deployed them on Linux-based AWS EC2 instances for consistent multi-environment deployments.
- Built automated **CI/CD** pipelines with GitHub Actions to streamline code integration, Docker image creation, and cloud deployment.
- Implemented secure networking and access control using **AWS Security Groups** and **VPC** configurations to ensure controlled communication between application and database tiers.

Adaptive Cybersecurity Education Platform **Feb 2025 – Dec 2025**
React.js, Node.js/Express.js, SQLite, TensorFlow.js

- Developed a full-stack cybersecurity education platform with three interactive modules using TensorFlow.js for adaptive client-side machine learning inference.
- Integrated **TensorFlow.js** for phishing URL detection and legal text classification, enabling real-time browser-based inference without server round-trips.

Technical Skills

Languages: Python, JavaScript, SQL, C
Cloud: AWS (EC2, S3, IAM, VPC, RDS, EKS)
Containers & IaC: Docker, Kubernetes, Terraform
CI/CD & Monitoring: Git, GitHub Actions
Databases: MySQL, PostgreSQL, MongoDB
Operating Systems: Linux, Windows

Achievements

- **Runner-Up** in REACT-THON - Built a music streaming UI with React.js featuring playlist management, search, and audio playback **February 2024**
- **Runner-Up** at department-level TechVision for presenting an **interactive gamification framework** on digital laws, cyber ethics, and legislation using **machine learning** **November 2024**
